Course content

Why Attend

Course Introduction

This Cybersecurity and Enterprise Resilience training course is designed to equip professionals in both public and private sectors with a comprehensive understanding of cybersecurity threats, their impact, and appropriate response strategies from various organizational perspectives.

Suitable for employees, operational managers, and strategic managers, the course enables participants to collaborate effectively with IT departments and security experts to ensure secure business systems and data.

This training course will feature:

• Increase awareness of the current state of cyber threats and their implications

• Understand various types of systems security threats

• A framework to develop a strategy to response to security threats

• Legislation, polices and regulatory frameworks relevant to systems security and data privacy

• Understand emerging technologies implications on social, organizational and technical systems

Course Objectives

By the end of this training course, participants will be able to:

• Identify and understand different types of cyber security threats

• Plan to respond to these threats

• Start designing for security when thinking about IT systems and data

• Apply good practices in planning for systems security and threats handling

• Increase the awareness of legal and regulatory frameworks relevant to data and systems use

Who should Attend?

This training course is suitable to a wide range of professionals but will greatly benefit:

• Business departments and unites managers in private and public organizations

Course content

Course Objectives

- Professional users of IT systems
- IT developers
- Digital business strategic managers
- Digital entrepreneurs

Course outline

Introduction to Cyber Security in contemporary organisations

Who wants to compromise information? How do they do it?

Cyber security and Enterprise Resilience

How can we begin to analyze how an enterprise works with IT?

Security risks and assessments for BYOD

State of the art security and protection

Data (small/big) protection

Overview of business perspective and motivations

Corporate responsibility, risk, compliance, legal issues

End users and managerial perspectives on Cyber Security

Managerial and strategic issues for enterprise resilience

Threats, impacts, assessment framework and mitigation

Cyber risk management

Legislations, policies and standards for information security and protection

National and European legal frameworks and regulation. Industry standards, accreditation and training

Security for Critical Infrastructure

IT governance and standards

Course content

Course outline

Autonomous systems security and safety

Use cases from public and private sectors

Emerging technologies (Blockchain, IoTs and AI) opportunities & vulnerabilities

Scenarios planning/analysis for four different Cyber Security challenges

Design for systems and data security

Seminar dates

Available seminar dates
