Why Attend

Why Attend Cyber security is no longer only an IT responsibility. Every employee, manager, and business function plays a role in protecting information, systems, and operations from growing cyber threats. Understanding the basics of cyber security helps professionals reduce risk, respond effectively to incidents, and support compliance requirements. This course provides non-IT professionals with practical knowledge to recognize threats, understand controls, and contribute to a stronger security culture.

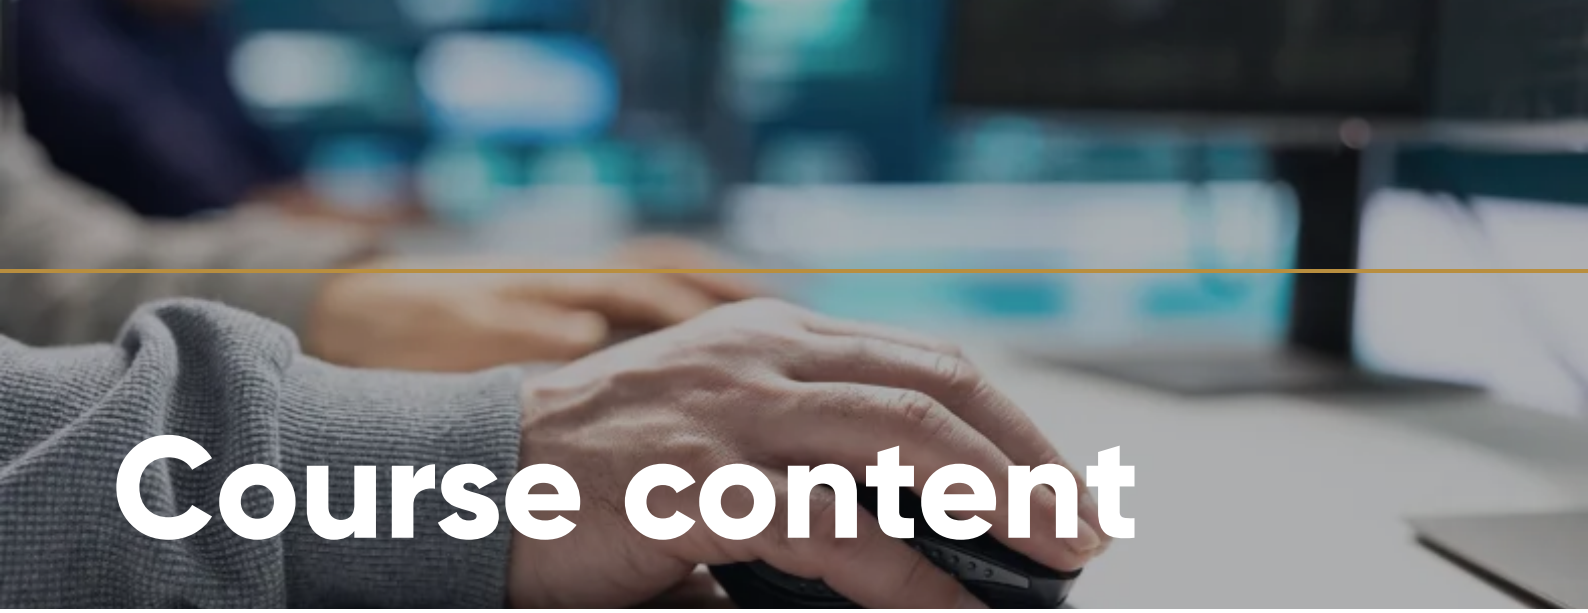
Course Methodology This course uses an interactive and practical approach through presentations, case studies, group discussions, scenario exercises, awareness activities, and real workplace examples.

Course Objectives

- Understand core cyber security concepts and terminology
- Recognize common cyber threats and attack methods
- Identify key security controls in organizations
- Understand authentication, encryption, and network basics
- Learn cloud computing security fundamentals
- Support incident response and reporting processes
- Understand business continuity and disaster recovery basics
- Strengthen personal and organizational cyber awareness

Target Audience

- Managers and Supervisors
- Administrative Staff
- HR Professionals
- Finance and Procurement Staff
- Operations Personnel



Course content

Target Audience

- Project Managers
- Any non-IT employee seeking cyber security awareness

Target Competencies

- Cyber Security Awareness
- Risk Recognition
- Incident Reporting
- Compliance Awareness
- Data Protection
- Security Controls Understanding
- Business Continuity Awareness

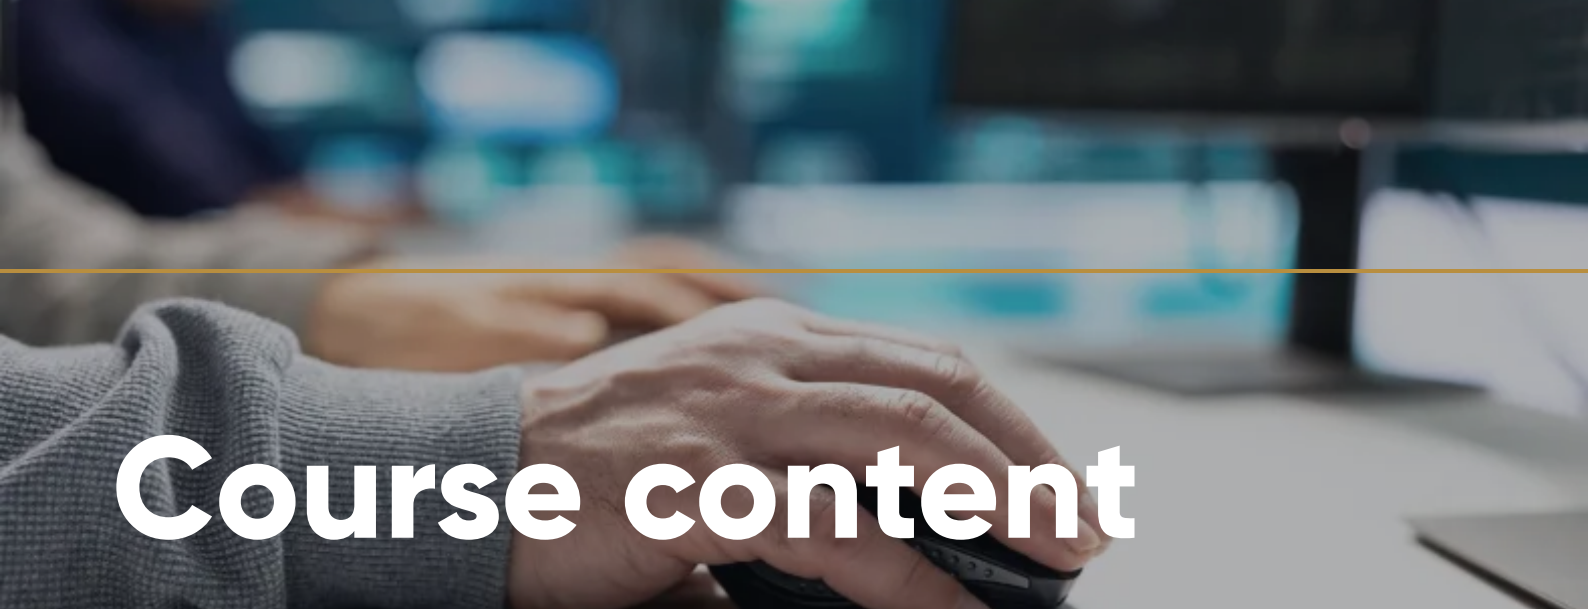
Course outline

Day 1: Fundamentals of Cyber Security

- Security concepts and definitions
- Importance of cyber security in modern organizations
- Cyber security standards
- Compliance and regulatory requirements
- High-profile cyber attacks
- Lessons learned from major incidents

Day 2: Security Controls and Understanding the Threat

- Security controls overview
- Technical controls



Course content

Course outline

- Physical controls
- Administrative controls
- Understanding the threat landscape
- Threat actors
- Common attack vectors
- Introduction to malware

Day 3: Technical Aspects for Non-IT Professionals

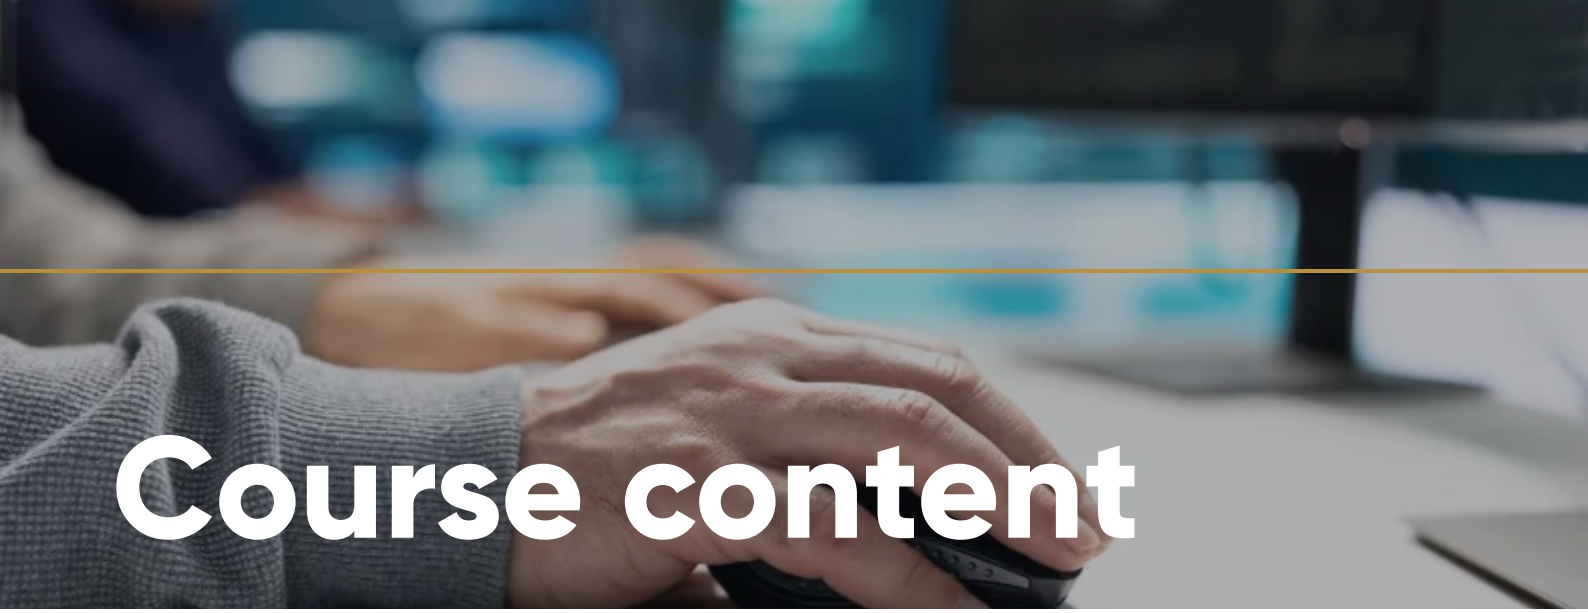
- Authorization and authentication
- Password security and access control
- Encryption fundamentals
- Network security fundamentals
- Safe use of email and internet services
- Cloud computing basics and security considerations

Day 4: Incident Management

- Overview of incident response
- Recognizing and reporting security incidents
- The incident response lifecycle
- Roles and responsibilities during incidents
- Communication during cyber events
- Incident documentation and lessons learned

Day 5: Resilience and Recovery

- Introduction to business continuity management



Course content

Course outline

- Disaster recovery fundamentals
- Protecting critical business operations
- Personal actions during cyber disruption
- Incident response exercise
- Final workshop: Building a cyber-aware workplace plan
